Integration Overview

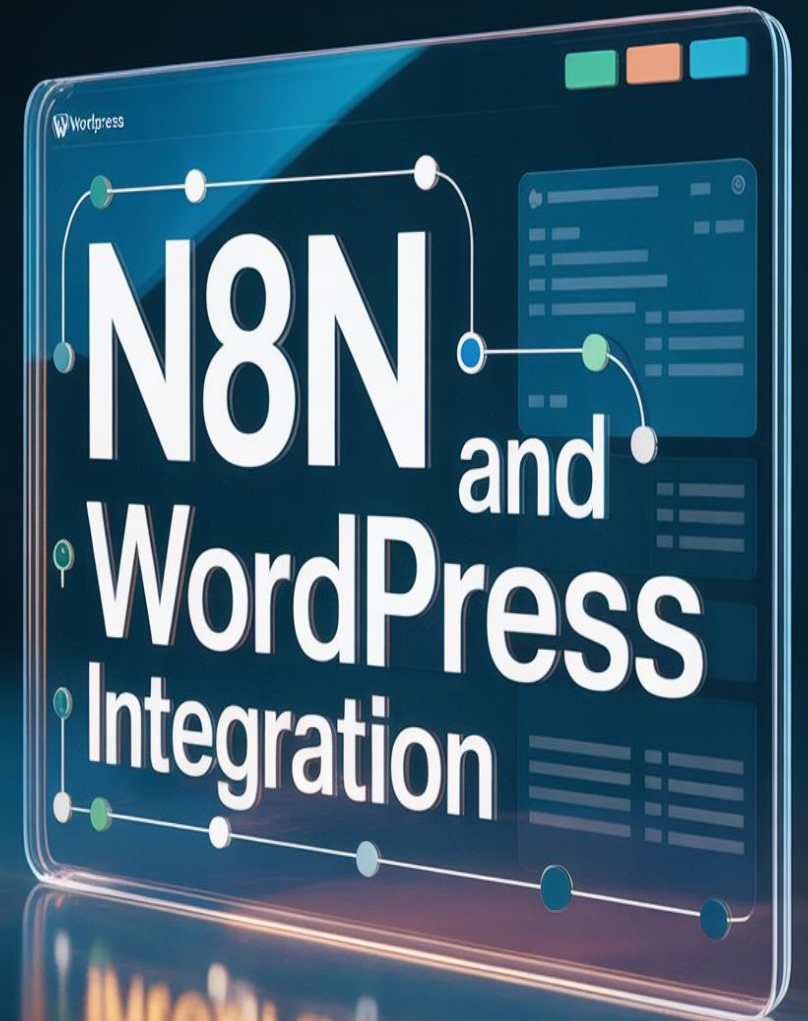

What You Have is a Complete Business Platform

- Business set up on WordPress
- Developed Products with n8n
 - AI Newsfeed Agent– Free Trial
 - AI Newsfeed Agent - Subscription
- Monitor Sales
- Add courses
- Drip Email campaign for marketing purposes

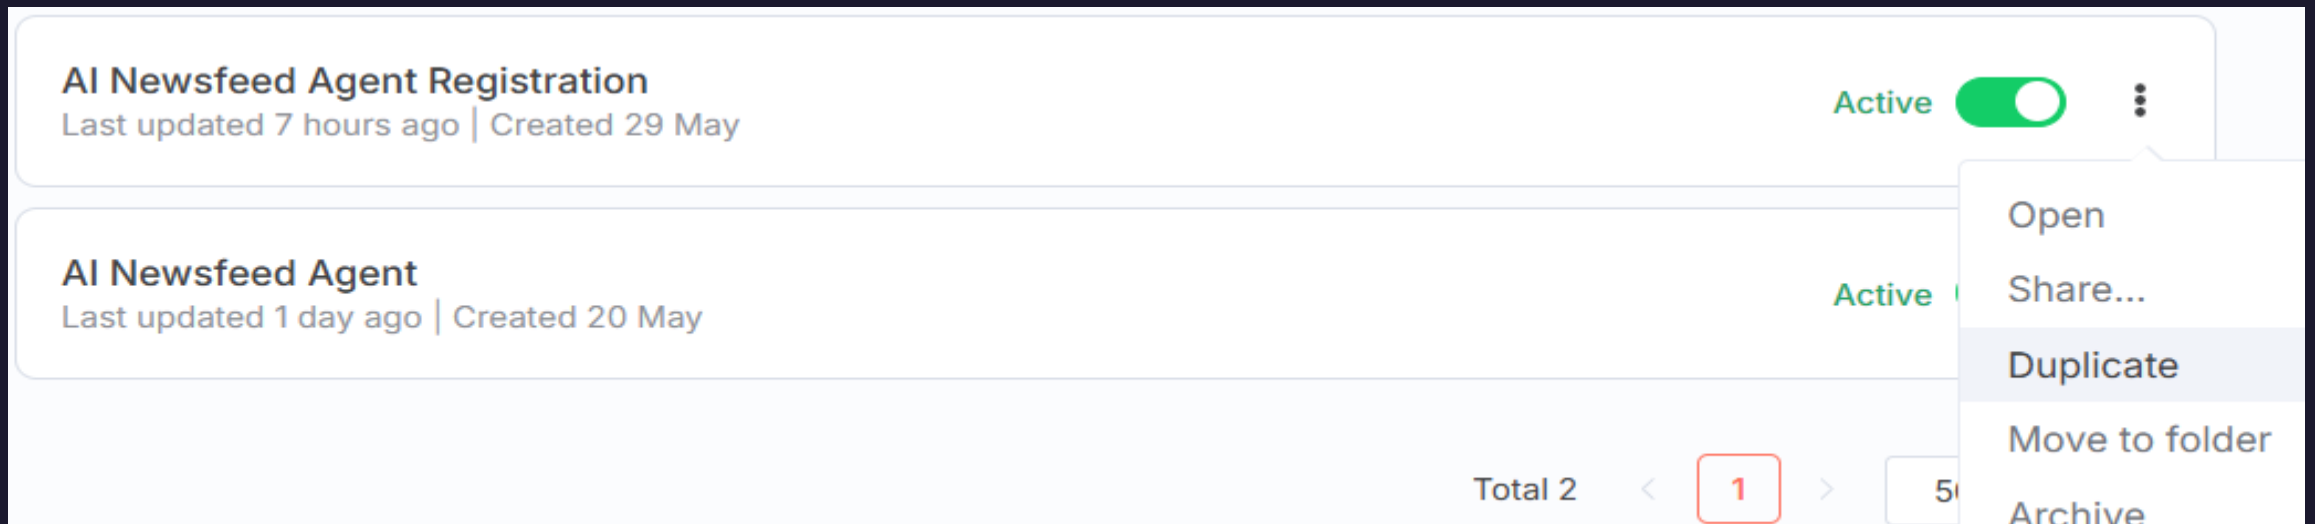

What We Have Learned

- Creating a website with WordPress and WooCommerce
- Creating products with n8n
- Creating courses in WordPress and WooCommerce
- Integrating WordPress, Tutor, WooCommerce, and n8n

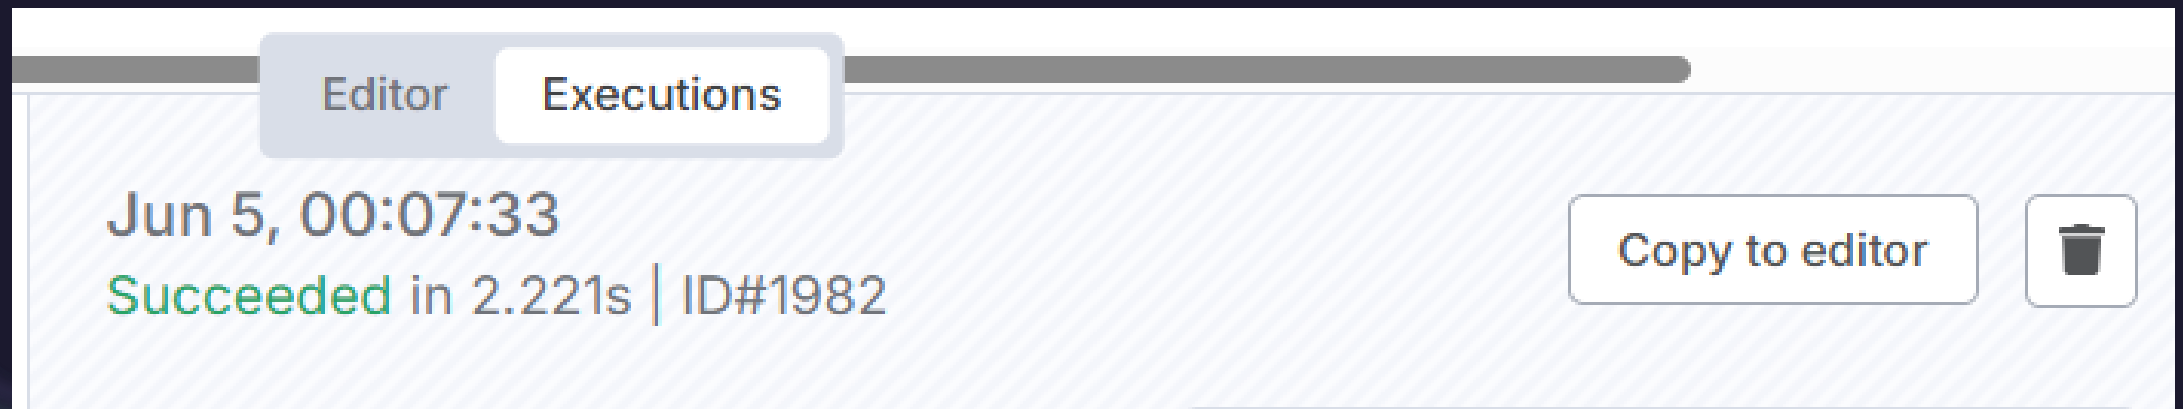

Tips

- Use the CTR key and the mouse to move the Workflow in n8n
- You can add some Sticky Notes to organize your workflow. Search for it by clicking the +
- You can duplicate a node within a workflow or copy one or more nodes to a new workflow.
- Use different URL for each Webhook triggers
- You can duplicate the entire Workflow, so you don't start from scratch to create a registration module for a new product. Make sure to change all the field mapping and especially the Google Sheet name.

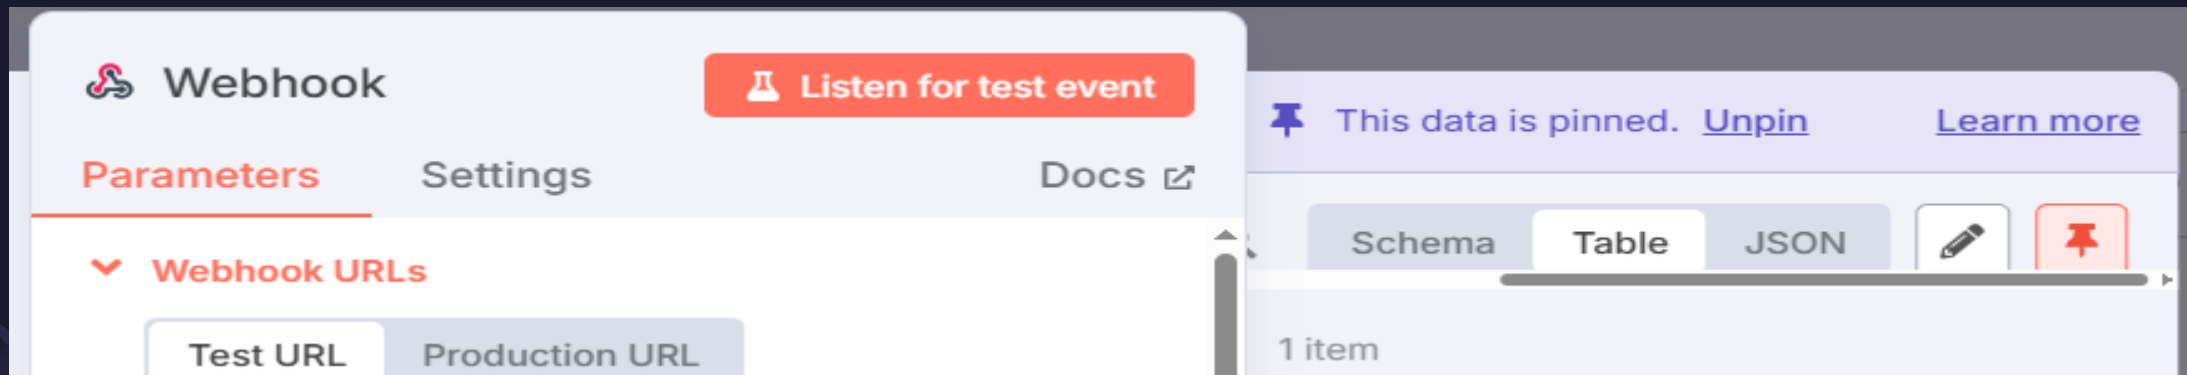

Tips (Continued)

- To see if a workflow was executed, click on the Execution tab at the top of the workflow. Click on Editor to return to your workflow.
- Within the Execution tab click on the Copy to editor button to copy a workflow from the Execution tab to the Editor tab. This is important as it also copies the data. You can then re-use the data for testing.

Tips (Continued)

- To keep the data for testing purposes, you can add a Pin to a node. To do this double click on the node, go to the output data section at the right. At the top you will need to scroll to the right until you see the Pin. Click on the Pin.
- To test in incognito mode, click ctrl+shift+n

Pitfalls

- You need to set up the WordPress site ahead of time, as it takes 24 hours for your new URL to become active.
- Sometimes there is a long delay before the n8n Webhook trigger captures the WooCommerce transaction.
- Data input errors: Incorrect emails or emails entered with typos result in no action. You need to send an email to the user when they enter the wrong email.
- The Get Row node does not return a False or the data if it doesn't find a row
- When you use ChatGPT to create an outline, you need to specify that you want to use free tools
- When you get JSON code from ChatGPT, change the variables to the ones in your input.

Feedback

The image features a dark blue background with glowing, ethereal lines in shades of blue and purple. Several large, glowing question marks are scattered across the scene, some appearing as simple outlines and others with a more complex, multi-layered glow. The text "AI QUESTIONS" is prominently displayed in the center in a bold, white, sans-serif font. The overall aesthetic is futuristic and digital, suggesting themes of artificial intelligence, technology, and inquiry.

AI QUESTIONS
